

This Week

The median list price in LOS ANGELES, CA 90067 this week is \$2,442,000.

Inventory and days-on-market are both trending higher recently. However, the improving Market Action Index implies some increased demand will temper the negative trends.

Supply and Demand

- Home sales have been exceeding new inventory for several weeks. However because of excess inventory, prices have not yet stopped falling. Should the sales trend continue, expect prices to level off soon and potentially to resume their climb from there. Watch prices as the market transitions from a Buyer's market to a Seller's market.

Market Action Index

The Market Action Index answers the question "How's the Market?" by measuring the current rate of sale versus the amount of the inventory. Index above 30 implies Seller's Market conditions. Below 30, conditions favor the buyer.

Price

- Again this week in this zip code we see a downward notch for prices. Pricing has been weak in recent weeks and versus their absolute-high level. At this point, we will be looking for a persistent upward shift in the Market Action Index as a leading indicator for a trough in prices.
